

Appendix G: Information System Contingency Plan (ISCP)

This needs work that may have been completed elsewhere and needs to be moved into here. This needs MVP and Normalized content examples

MVP Key Points Include:

- The CP-2 (`id = cp-2` control should have `links` entries to the RoB

This is not normalized and is only for legacy conversion MVP

Normalized Key points include:

- attach the ISCP as a back-matter/ `resources` entry
- create a component for the ISCP
 - From the componet, add a `links` entry that references the `resource` (`#uuid-value`)
- The CP-2 control has `by-components` entrys that cite the ISCP component

Reference Components [need citation - there may be a page for document-type compnents] and Attachments pages. Don't duplicate those explanations here.
